DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: the U.S. Patent serial no. that the applicant refers to on page 16 line 3 of the disclosure is omitted. Also, proper punctuation is required on page 5, line 10 of the disclosure.

Appropriate correction is required.

Claim Objections

2. Claim 10 and 27 are objected to because of the following informalities: The word send in line 2 of claim 10 and in line 13 of claim 27 is interpreted to mean sent and should be corrected including any subsequent recitations of the word. Also, in claim 10, the claim ends with an and but fails to include additional wording, and therefore should be removed. Appropriate correction is required.

Claim Rejections - 35 USC § 112

- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claims 1, 17, 25, and 26 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

For the purpose of expediting examination step (b)(ii) of claims 1, 17 and 26 and step (c) of claim 25: periodically sending the subscribed to subscription-based content for serving the

Art Unit: 3639

subscription-based content is interpreted to mean merely sending subscription-based content to subscribers of the content.

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 1-6, 9-14, 17-22, 26, and 27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ricci, Pub. No. US2002/0062290 A1 in view of Ferguson et al., U.S. Patent No. 5,819,092.

As per <u>Claims 1, 9 and 17</u>, Ricci discloses a method for generating revenue in a peer-topeer file delivery network, the network including at least one server node and multiple client nodes, the method comprising the steps of:

- (a) enabling peer-to-peer file sharing of content by,
 - (i) initiating on one client node a download of a particular content item served from the server node or another client node, and
- (ii) charging a fee based on a quantity of the content served (Para. 22, 53); and
 (b) enabling decentralized downloads of subscription-based content by
 - (i) allowing the client nodes to subscribe to one or more of the subscription-based content (Para. 57, 61),

Art Unit: 3639

- (ii) periodically sending the subscribed to subscription-based content to each the respective subscribing client nodes (Para. 40).

Page 4

Nonetheless, Ricci fails to disclose charging a fee to providers of the subscription-based content for serving the subscription-based content. However, Ferguson et al. teaches levying fees on content providers for transactions with the users (Col. 4, lines 53-60). Therefore, it would have been obvious to one of ordinary skill in the art at the time of applicant's invention to modify the method of Ricci and charge a fee to subscription-based content providers for transmitting their content as taught by Ferguson et al. because charging users and content providers a fee would greatly increase profitability of the file sharing service.

As per Claims 2, 10, 18, Ricci further discloses a method of providing direct marketing by sending marketing content to the client nodes from the server node as well as from other client nodes (Para. 65, lines 1-8). Ricci fails to disclose charging a fee to providers of the marketing content. However, Ferguson et al. teaches charging a fee to providers of the marketing content (Col. 14, lines 30-31). Therefore, it would have been obvious to one of ordinary skill in the art at the time of applicant's invention to modify the method of Ricci to include charging marketing content providers a fee as taught by Ferguson et al. because charging marketing content providers a fee would greatly increase profitability of the file sharing service.

As per <u>Claims 3, 11, and 19</u>, Ricci further discloses a method enabling client nodes to become affiliate servers that deliver content to other client nodes (Para. 30). Ricci fails to disclose paying owners of the affiliate servers a percentage of the fee charged for serving the

files. However, Ferguson et al. teaches paying the user of the service (Col. 9, lines 2-9).

affiliate servers would increase retention of the affiliate server owners.

Therefore, it would have been obvious to one of ordinary skill in the art at the time of applicant's invention to modify the method of Ricci to include paying users of the affiliate servers a portion of the fee charged for serving the files as taught by Ferguson et al. because paying owners of the

As per Claims 4-6, 12-14, and 20-22, Ricci further discloses a method including the steps of charging a fee from a user of the initiating client node for the download of the fee-based content (Para. 22, 53). Ricci fails to disclose charging a fee from a provider of the free content for serving the free content. However, Ferguson et al. teaches charging content providers a fee (Col. 4, lines 53-60). Therefore, it would have been obvious to one of ordinary skill in the art at the time of applicant's invention to modify the method of Ricci to include charging content providers a fee for serving the free content as taught by Ferguson et al. because charging content providers a fee would greatly increase profitability of the file sharing service.

As per <u>Claims 26, and 27</u>, Ricci discloses a system for generating revenue in a peer-topeer file delivery network, the network including at least one server node and multiple client nodes, the method comprising the steps of:

- means for enabling peer-to-peer file sharing of content whereby one client node initiates a download of a particular content item served from the server node or another client node (Para. 18), and
- wherein a fee is charged based on a quantity of the content served (Para. 22, 53);

Art Unit: 3639

- means for providing direct marketing to client nodes such that marketing content is send to the client nodes from the server node as well as from other client nodes (Para. 65, lines 1-8),

- means for enabling client nodes to become affiliate servers that deliver content to other client nodes (Para. 30),

Nonetheless, Ricci fails to disclose:

- means for enabling decentralized downloads of subscription-based content that the
 client nodes subscribe to in order to receive periodic updates, wherein a fee is charged
 to providers of the subscription-based content for serving the subscription-based
 content to the client nodes;
- owners of the affiliate servers are paid a percentage of the fee charged for serving the files.
- a fee is charged to providers of the marketing content.

However, Ferguson et al. teaches users of the system receive periodic updates; levying fees on content providers for transactions with the users; paying users of affiliate servers for serving the files, and finally teaches charging marketing content providers a fee (Col. 15, lines 7-11; Col. 4, lines 53-60; Col. 14, lines 30-31; Col. 9, lines 2-9). Therefore, it would have been obvious to one of ordinary skill in the art at the time of applicant's invention to modify the method of Ricci and include providing periodic updates to users, levying fees on content providers, and to pay owners of affiliate servers for serving the files as taught by Ferguson et al. because charging content providers a fee would greatly increase profitability of the file sharing service. Also,

Art Unit: 3639

paying owners of affiliate servers because paying owners of the affiliate servers would increase retention of the affiliate server owners.

7. Claims 7, 8, 15, 16, 23-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ricci, Pub. No. US2002/0062290 A1 in view of Ferguson et al., U.S. Patent No. 5,819,092 as applied to claims 1, 9, and 17 above, and further in view of Applicants admission of the prior art.

As per <u>Claims 7, 15, and 23</u>, Ricci fails to disclose a method of charging a fee from the provider of the marketing content based on a cost per click. However, Applicant discloses that this feature is old and well known, see Specification, Page 11, lines 8-11. Therefore, it would have been obvious to one of ordinary skill in the art at the time of applicant's invention to modify the Ricci and include charging a fee from the marketing content provider based on a cost per click as disclosed by Applicant. By Applicant's own admission, the feature of charging a fee from the provider of the marketing content based on a cost per click is admitted prior art.

As per Claims 8, 16, and 24, Ricci fails to disclose a method of charging a fee from the provider of the marketing content based on a cost per acquisition. However, Applicant discloses that this feature is old and well known, see Specification, Page 11, lines 8-11. Therefore, it would have been obvious to one of ordinary skill in the art at the time of applicant's invention to modify the Ricci and include charging a fee from the marketing content provider based on a cost per acquisition as disclosed by Applicant. By Applicant's own admission, the feature of

Art Unit: 3639

charging a fee from the provider of the marketing content based on a cost per acquisition is admitted prior art.

As per Claim 25, Ricci fails to disclose a method for providing subscription-based decentralized file downloads to client nodes in a peer-to-peer public network, each of the client nodes affiliated with a user account, the method comprising the steps of:

- (b) allowing the client nodes to subscribe to one or more of the content files (Para. 57, 61);
- (c) periodically delivering the particular content files to the respective clients nodes that subscribed to the content files (Para. 40);
- (f) charging the user accounts of the client nodes that received fee-based subscription content files (Para. 22, 53).

Nonetheless, Ricci fails to disclose:

- (a) receiving content files from at least one content provider, the content including free subscription content files, fee-based subscription content files, and marketing content files;
- (d) charging the content provider a fee for delivering the content files to the client nodes over the network.

However, Ferguson et al. teaches receiving content files from content providers; and also charging content providers a fee for serving the content files to the users (Col. 4, lines 53-60). Therefore, it would have been obvious to one of ordinary skill in the art at the time of applicant's invention to modify the method of Ricci and include receiving content files from content

Art Unit: 3639

providers and charging content providers a fee for serving the files as taught by Ferguson et al. because charging a variety of content providers a fee would greatly increase profitability of the file sharing service. Ricci and Ferguson et al. nonetheless fail to disclose charging the content provider a fee for the marketing content files based on a number of users that access the marketing content files once downloaded. However, Applicant discloses that this feature is old and well known, see Specification, Page 11, lines 8-11. Therefore, it would have been obvious to one of ordinary skill in the art at the time of applicant's invention to modify the Ricci and include charging content provider a fee based on the number of users to access the content as disclosed by Applicant. By Applicant's own admission, the feature of charging a fee from the provider of the marketing content based on a cost per acquisition is admitted prior art.

Double Patenting

8. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Art Unit: 3639

9. Claims 1-27 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 16 and 17 of copending Application No. 09/814319 in view of Ferguson et al., U.S. Patent No. 5,819,092.

This is a provisional obviousness-type double patenting rejection.

Although the conflicting claims are not identical, they are not patentably distinct from each other. Claims 16 and 17 of Application No. 09/814319 recite:

A peer-to-peer file delivery network, comprising:

- at least one server node;
- nodes running a client application, wherein the client application works and operates in conjunction with the server node to enable secure and reliable peer-to-peer file sharing between two client nodes by,

enable secure and reliable peer-to-peer file sharing between two client nodes by,

- digital certificate, in response to a registration process, wherein the digital certificate includes a private key and a public key,
- in response to a file being selected for publication on a first client node by a first user,
 - generating and associating a digital fingerprint with the file,
 - generating a bitstream ID for the file and including the bitstream ID in the fingerprint, and
 - using the user's private key to generate a digital signature from the

Art Unit: 3639

file and including the digital signature in the fingerprint.

adding an entry for the file to a search list of shared files on the server

- node and storing the fingerprint on the server,
 - in response to a second client node selecting the file from the search list on the server node, automatically transferring the file from the first client node directly to the second client node, and
- authenticating the file by the second client node by generating a new bitstream ID, comparing the new bitstream ID to the bitstream ID in the fingerprint stored on the server, and using the user's public key to decrypt the digital signature to determine the authenticity and reliability of the file and publisher.

The network of claim 17 wherein the client application operates in conjunction with the server node to enable subscription-based decentralized file downloads to the client nodes by

- allowing the client nodes to subscribe with the server node to periodically receive copies of one of the files,
- when providing a current subscribing client node with the file, locating the closest client node containing the file, and
- transferring the file from the closest node directly to the current subscribing node, thereby efficiently utilizing bandwidth.

Claims 16 and 17 of Application No. 09/814319 differs since it further recites additional claim limitations including generating account information for a user of each client node, including a digital certificate; authenticating the file by the second client node by generating a new bitstream

Art Unit: 3639

ID; and allowing client nodes to subscribe with the server node to periodically receive copies of one of the files. However, it would have been obvious to one of ordinary skill in the art at the time of applicant's invention to modify claims **16 and 17** of Application No. 09/814319 by removing the limitations directed to generating account information, authenticating a file using a bitstream, and allowing client nodes to subscribe with the server node resulting generally in the claims of the present application since the claims of the present application and the claims recited in Application No. 09/814319 actually perform a similar function. It is well established that the omission of an element and its function is an obvious expedient if the remaining elements perform the same function as before.

Also, claims 16 and 17 of Application No. 09/814319 differ since they fail to recite a method for charging a fee to providers and users of the subscription-based content, either for serving the subscription-based content to the users or for receiving the content. Ferguson et al. teaches a method for levying fees against both users and content providers in an online system (Col. 4, lines 53-67). Therefore, it would have been obvious to one of ordinary skill in the art at the time of applicant's invention to modify claims 16 and 17 of Application No. 09/814319 and include the method of charging a fee to providers and users of the subscription-based content as taught by Ferguson et al. because charging users and content providers a fee would greatly increase profitability for the service.

Art Unit: 3639

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
